#### **Compendent, Inc., Santa Barbara CA**

February 2001 – Present

Starting and running a small startup company developing for outsourcing of DSP R&D and implementation, and licensing intellectual property. Developing technologies for various communication networks, including cellular network, satellite network, telephone networks, packetized networks, and military networks. R&D and implementations of technologies related to streaming-media systems. DSP contracts for SignalCom (Microsoft company) and the Department of Defense (DoD, DARPA, NATO). DSP hardware and software. R&D and implementation DSP projects - low-rate speech coder, noise cancellation, and communication for wireless applications and streaming media applications for environments that include various timing synchronizations, error control coding (such as FEC), modem (various modulations), etc.. Voice communication product development for cellular networks, wireless networks, packetized networks, VoIP, satellite communication, military and security radio devices, etc.. Exploring advanced robust positioning methods that combined methods such as GPS and cellular network signals.. Developing proprietary timing and synchronization solution for links and systems with multiple data timings. Development and implementation of adaptive algorithms, networking protocols, multi-tasking, embedded systems, timing and synchronization, etc.. Inventor of a patent for transmission of signals over degraded channel such as cellular network, and

packetized network. The company developed, manages the production, and sells line of proprietary electronic boards and standalone devices, or can be embedded in other devices or systems having different timing sources, in synchronous and asynchronous links.

**DSP Communications, Israel,**

January 1994 - September 1995

• Title: *Speech Coding Group Leader*

DSPC is a cellular technologies manufacturer of cellular phone chipset that includes the cellular network interface and the voice compression. R&D and implementation of a proprietary multi-rate speech coder at 4-8 kbps at floating-point and fixed-point. Leading the DSP development and implementation of PDC's PSI-CELP and VSELP standards, and noise cancellation on the company's DSP chipset (including FEC, and modem/modulation, masked on TI's TMS320c54x). Developing and implementation of a noise-canceller for digital-cellular phone. The PDC chipset has become the flag ship of the company. Oded's contribution was the key in turning DSPC, from a poor company (in term speech coding expertise) in 1994, into a very successful one, leading to a \$1.6 billion acquisition by Intel.
